Introduction

01

As countries strive for economic progress and improved living standards, understanding the factors that contribute to a high-income or developed economy becomes crucial.

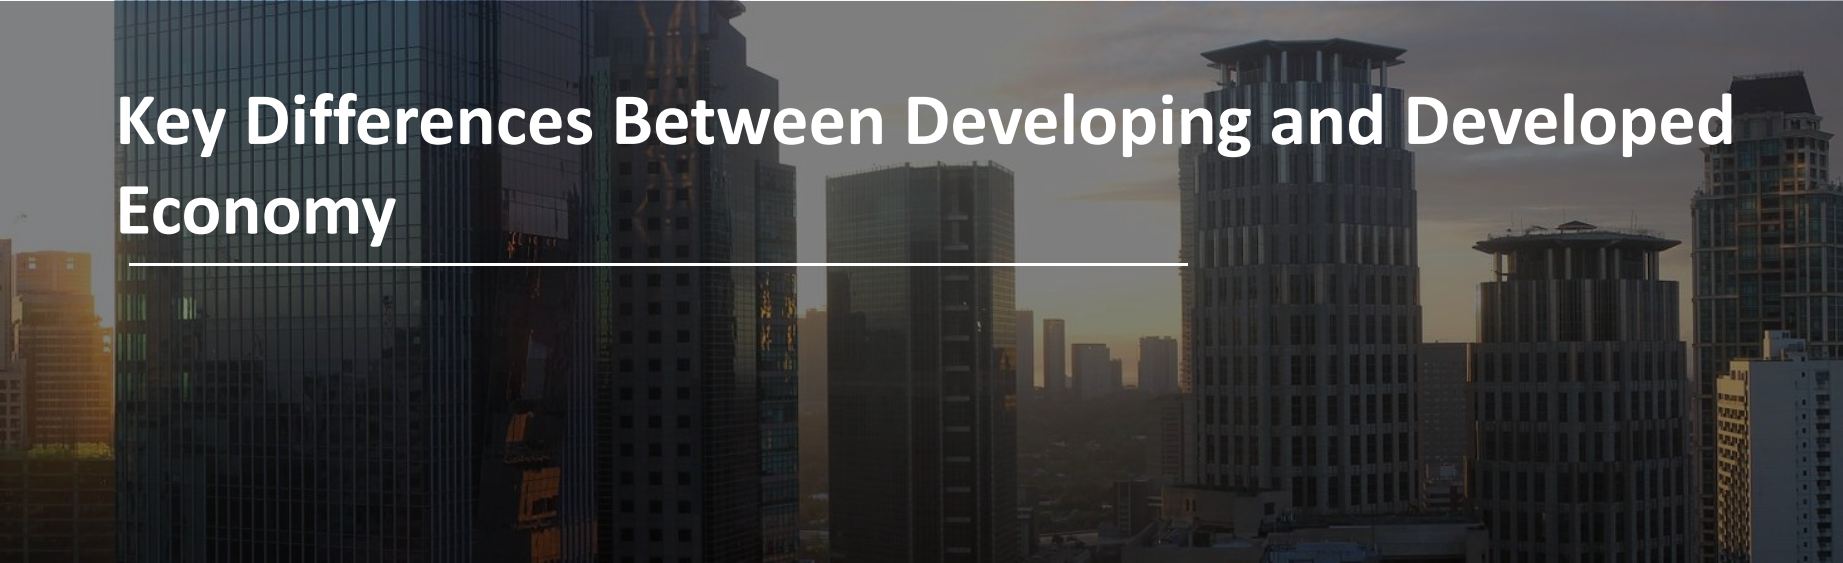

We delve into the key indicators used to assess a nation's economic well-being, technological advancement, and overall quality of life to differentiate between a developing and a developed economy.

From gross domestic product (GDP) to human development indices, we analyse Sarawak and Malaysia's achievements in its journey towards a developed economy.

Sarawak, as a forward-thinking State, encountered its unique set of challenges. However, it has persistently introduced significant transformations aimed at enhancing resource productivity and adding greater value.

Key Differences Between Developing and Developed Economy

02

Key Differences Between Developing and Developed Economy

Key Differences	Developing Economy	Developed Economy
Income Levels	<ul style="list-style-type: none"> *Lower per capita income compared to developed economies. *Often characterized by a significant proportion of the population living in poverty. 	<ul style="list-style-type: none"> *Higher per capita income and overall wealth. *A smaller percentage of the population lives in poverty.
Industrial Structure	<ul style="list-style-type: none"> *Relies heavily on agriculture and low-skilled labor. *Limited diversification into other sectors. 	<ul style="list-style-type: none"> *Diversified economy with a strong presence in services, manufacturing, and technology. *High levels of innovation and specialization.
Infrastructure and Technology	<ul style="list-style-type: none"> *Basic infrastructure may be lacking or underdeveloped. *Limited access to advanced technology. 	<ul style="list-style-type: none"> *Well-established infrastructure (roads, utilities, communication networks). *High adoption of cutting-edge technology.

Key Differences Between Developing and Developed Economy

Key Differences	Developing Economy	Developed Economy
Education and Healthcare	<ul style="list-style-type: none"> *Uneven access to quality education and healthcare. *Higher illiteracy rates and lower life expectancy. 	<ul style="list-style-type: none"> *Comprehensive education systems and advanced healthcare services. *Higher literacy rates and longer life expectancy.
Standard of Living	<ul style="list-style-type: none"> *Lower living standards, inadequate housing, and sanitation challenges. *Income disparities between urban and rural areas. 	<ul style="list-style-type: none"> *Higher living standards, better housing, and improved sanitation. *More equitable distribution of resources.
Global Influence and Trade	<ul style="list-style-type: none"> *Less influential on the global stage. *May rely heavily on exports of raw materials. 	<ul style="list-style-type: none"> *Significant global influence in politics, trade, and culture. *Diverse export portfolio, including high-value goods and services.
Environmental Impact	<ul style="list-style-type: none"> *May face challenges related to environmental degradation and resource depletion. 	<ul style="list-style-type: none"> *Strives for sustainable practices and environmental conservation.

Key High Income and Developed Economy Measurements

03

Key Measurements

01

Gross Domestic Product (GDP) per capita

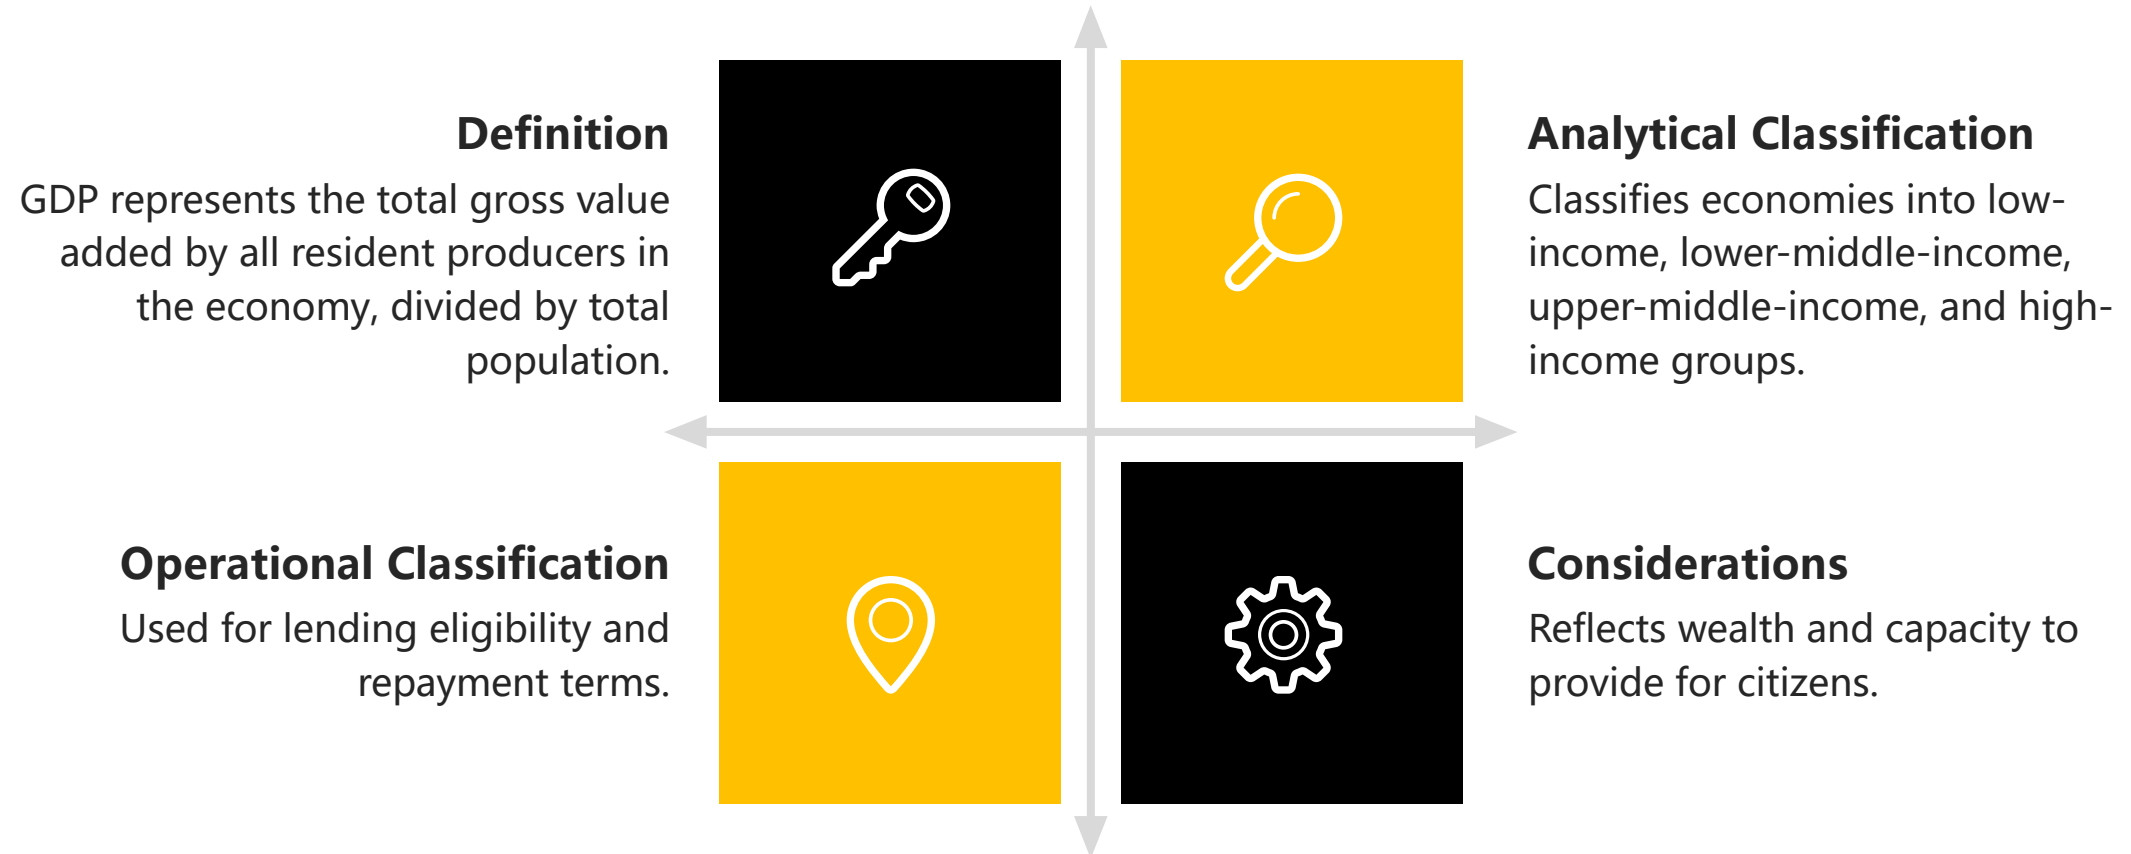

02

Gross National Income (GNI) per capita

03

**Human Development Index and
Inequality-Adjusted HDI (IHDI)**

Key Measurements (1) GDP per capita

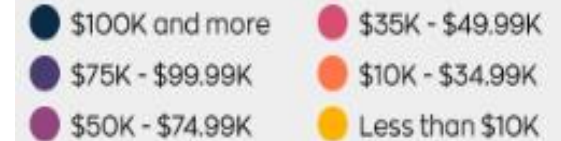

Ranking of countries by GDP per capita (2023)

GDP per capita (Purchasing Power Parity); international dollars

K - thousand

High income can be measured using various indicators such as average per capita income or gross domestic product (GDP) per capita above a certain threshold set by organizations like the World Bank.

Vision 2020 used this indicator to achieve a high income status of US\$15,000 which may not be adjusted according to the purchasing power parity.

Key Measurements (2) GNI per capita

Definition

GDP represents the total gross value added by all resident producers in the economy.

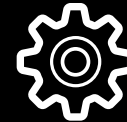

Use

Widely used for cross-country comparisons and assessing economic growth.

Significance

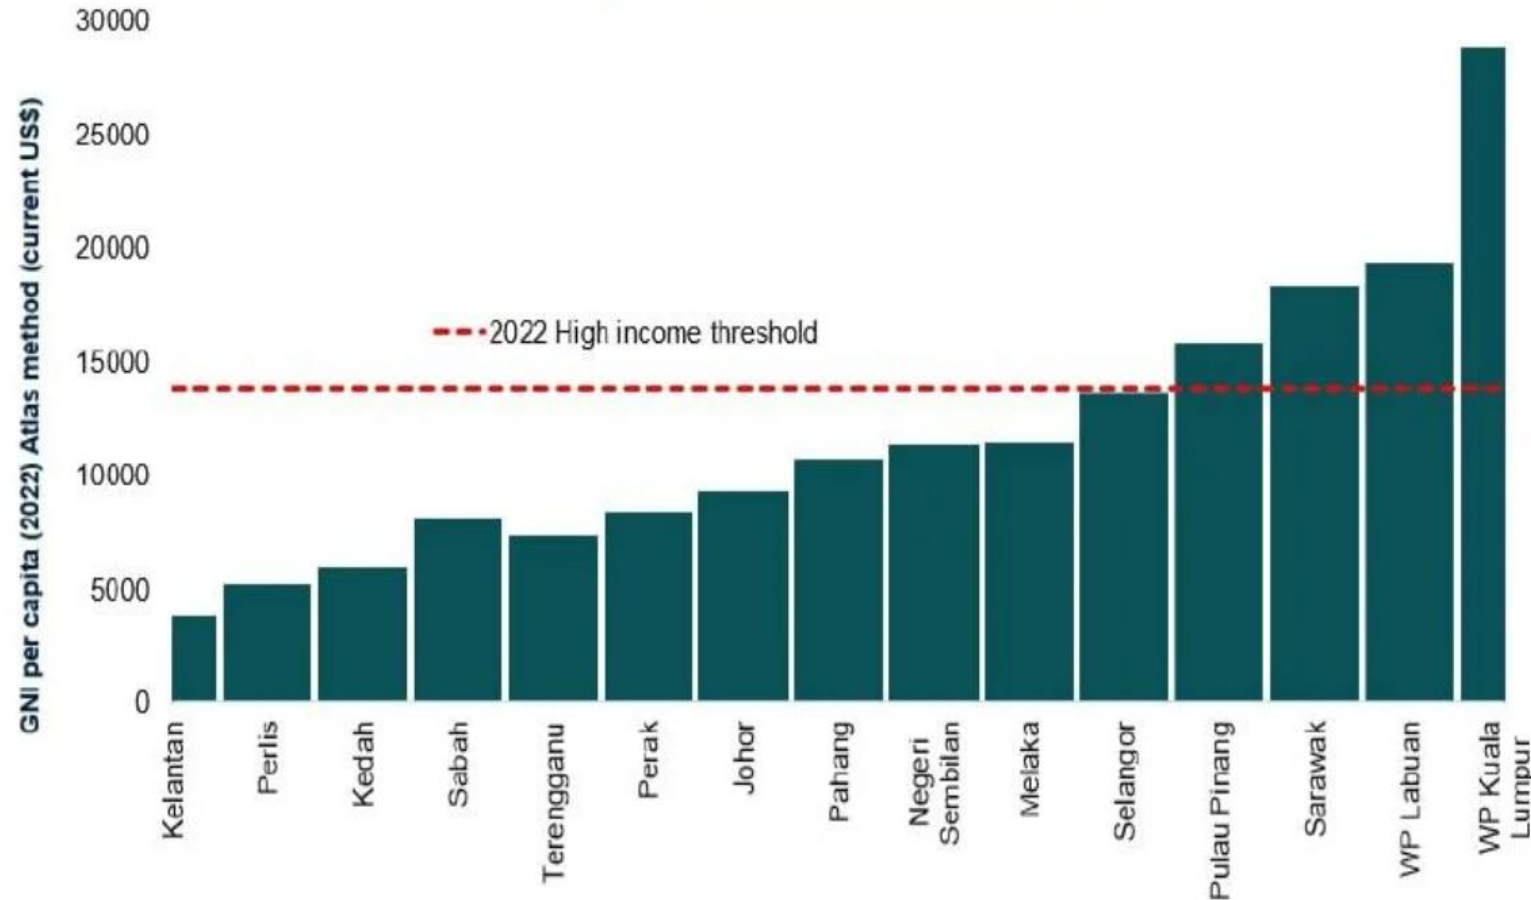

It provides insights into the overall economic activity and well-being of residents.

Limitations

Does not account for income distribution, environmental impact, or quality of life.

Fig : Sarawak reaches high income

World Bank's latest income classifications :

low income at under US\$1,085,

lower middle income at between US\$1,089 and US\$4,255,

upper middle income at between US\$4,256 and US\$13,205,

high income is more than US\$13,205.

Key Measurements (3) Human Development Index

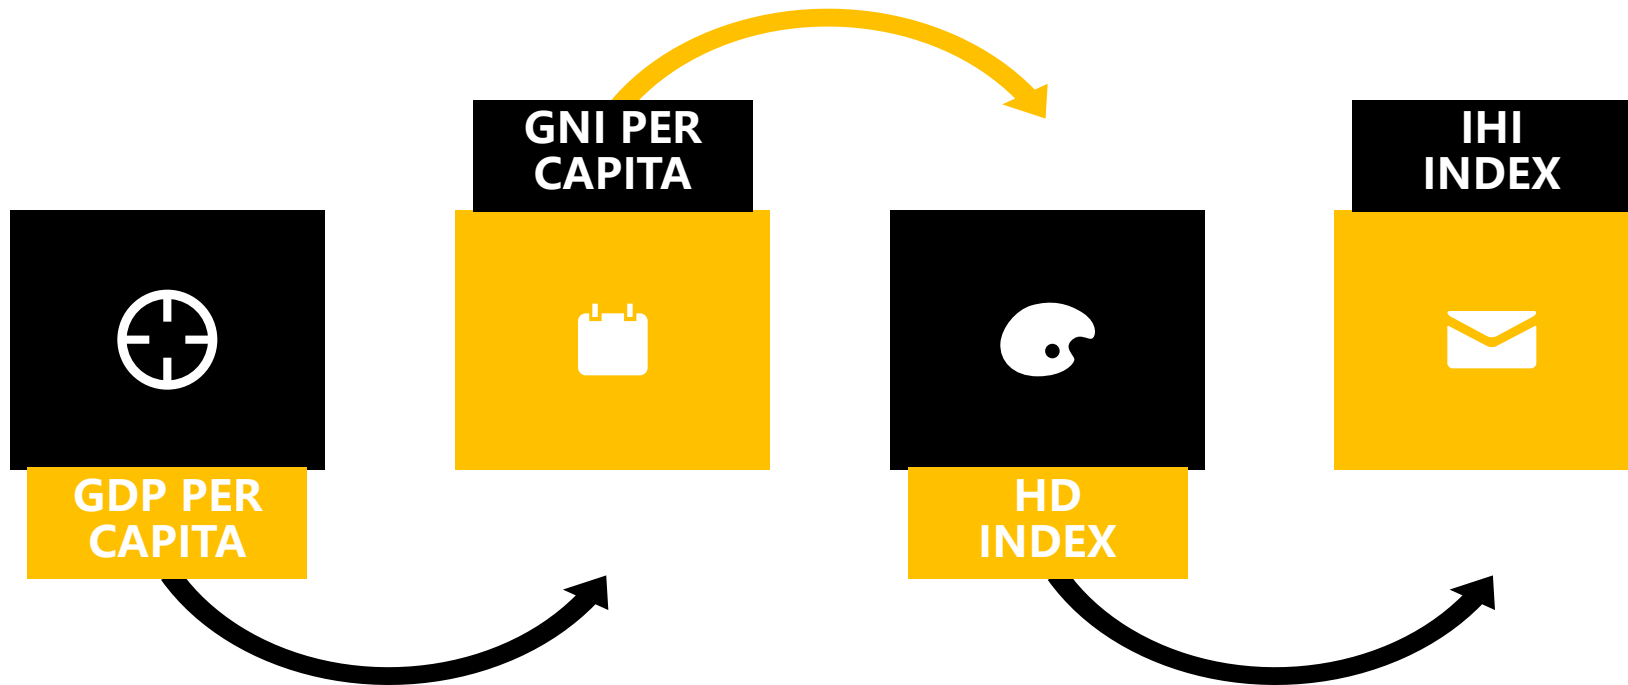

Malaysia has HDI at 0.803 (2021) ranked at no. 62 as high human development (HDI=0.755-0.895).

Key Measurements (4) Inequality-Adjusted Human Development Index

The IHDI offers a more nuanced perspective by considering inequality within a country.
Not all countries have IHDI, including Malaysia.

Proposed Measurement of High Income and Developed State of Sarawak

To date, HDIs are calculated at country level. The possibility of measuring HDI and IHDI at State level may be considered.

YOUR TITLE

In summary, while GDP and GNI per capita focus on economic output and income, the HDI takes a broader perspective by incorporating health, education, and living standards. Each indicator serves a different purpose and provides complementary insights into a country's development.

YOUR TITLE

important to note that measuring high income alone does not necessarily indicate overall development or quality of life for citizens in a nation.

The elements of a developed nation include a high standard of living for its citizens, strong economic growth and stability, advanced infrastructure such as transportation and communication systems, access to education and healthcare services, political stability with democratic institutions in place, low levels of corruption, technological advancement and innovation capability. Developed nations also tend to have well-defined environmental policies that prioritize conservation over exploitation. Achieving these elements requires careful planning and investment from both the public and private sectors over time.

Is Sarawak a Developed State?
